

Leg pain when you walk?

**Do you have Peripheral Artery Disease (PAD)?
You may qualify for a study using
*your own bone marrow cells.***

Peripheral Artery Disease

- Leg arteries are narrowed by fatty buildup.
- Legs have less blood flow.
- Walking causes pain.

The Study

Dr. Murphy is testing an experimental treatment at Indiana University to improve leg blood flow.

The study involves about nine study visits over about a one year period.

Are You Eligible?

- ✓ You have blocked arteries in at least one leg.
- ✓ You have intermittent claudication.
- ✓ One leg is more painful than the other.
- ✓ You must be able to walk on a treadmill without stopping due to arthritis, breathing problems or chest pain.
